# Mines and Prospects--Furnaces and Mills

# Newhouse Departs for Cactus Plant

Crushers Now Grinding and Concentration Inaugurated at the Southern Bonanza.

To be present at the practical initiation of the matchless mill with which the properties of the Newhouse mines in the southern camp have been equipped, and at which the active production of copper, gold and silver-bearing concentrates will begin the present week, the courageous begin the present week, the courrageous miner to whom the industry is indebted for it departed last night, accompanied by several members of his staff and ethers. The party, for which the San Fedro's management had provided a special Pullman car, consisted of Mr. Newhouse, president of the company, L. N. Kramer of New York, vice-president, and the Messrs. Hanchett and Thomas, with Hon C. C. Parsons, counsel for the Newhouse interests in this and heighboring States. As guests of the management were Roger C. Knox manager of the Revenue mines and mill at Norris, Mont. C. Alma Shay, superintendent of the n.ill at the properties in the north, and George West of the same organization, at the head of which is Mr. Newhouse.

It was the intention of Manager Bettles of the mill at Newhouse to begin the crushing of ores yesterday, according to a message which came to the munagement at an early hour, and with the bins, capable of holding as much as 2000 tons, filled, the tables will be put in motion, the reimbursement of the masterminer, who has made the undertaking possible, begun.

His observations at the new camp concluded, Mr. Newhouse will, accompanied

miner, who has made the undertaking possible, begun. His observations at the new camp concluded, Mr. Newhouse will, accombanied by Mr. Thomas, proceed to the properties of the Majestic company, where a supplemental and final examination is now being made by Manager Johnson and two expert sampling men of the one bodies of the O. K. group. There Mr. Newhouse, who has been already assured of the resources of the property, will close the examination, and the future policy of the undertaking will be announced. In the visit a great deal of interest is manifested, not only by the people of this city, but by the inhabitants of the entire region, who believe that under the direction of Mr. Newhouse a great deal awalts the company.

#### **COLD WEATHER IS** INTERFERING AT ALTA

Special to The Tribune. ALTA, Utah, Febra 18.—Alta has been

having very cold weather lately, the thermometer registering 23 degrees below zero. Several of the men working

low zero. Several of the men working on the tramway had their fingers and ears badly frozen.

Jerome and Thad Ireland had a very narrow escape during the last storm. They had gone over to the Miller mine in American Fork canyon, and when returning were caught in a side near the Silver King mine, between Alta and the Continental Alta. Jerome, who was in advance, was burled up to his neck, and if it had not been for his snowshoes he would have been taken over the cliffs, but luckly got out with no more than a bad scare.

The teams broke through to the Grizzly yesterday and loaded with ore for the smelter.

yesterday and loaded with ore for the smelter.

The Silver King mine has started to work with four men. M. M. Johnston, engineer for Mr. Newhouse, Jaas a bond on a large group of claims, and the work is being done for him.

There are reports of a strike in the Albien. A strike of ore here is expected at any time, as they are getting under the old ore bodies.

The Alta-Quincy is still looking well, and rich ore is being sacked.

Superintendent Doyle was over from the Pittsburg and says the large ore body is still holding its own in sinking. The ore blus at the Continental Alta are all full, awaiting shipment.

#### Capt. MacVichie Completes Experiments and Places Orders.

For the mill with which the properties of the Mexico Con Mining company in the State of Durango, Mexico, are to in the State of Durango, Mexico, are to be equipped, and with which the management will be enabled to convert its second-class ores, somewhat remote from transportation, to a high-grade product, plans are now being matured by the engineers of a Denver company, while orders for at least a portion of the machinery have been placed in the hands of the manufacturer, said Capt. Duncan MacVichie, on his return from Colorado, during the day. While all the returns from the experiments conducted by him at Denver have not been received, it has been demonstrated conclusively that plain concentration is the method best adapted to the ores of which so great a volume has been blocked out, and it is along that line that he will proceed in the equipment of the undertaking that promises to estrich its various interests, extending from this city to Boston. From the experiments he obtained a concentrate of the value of \$4.50 per ton, nor was this the best milling ore of which the property is capable. From the property the most favorable reports continue to come, and that it will attain a position among the foremost of Mexican producers. Capt. MacVichle has no doubt whatever. The effort of the management will be to get the mill in commission before the summer months have gone, and to this end work on the plans and the mill material will be under rush orders. be equipped, and with which the man-

### FROM THE SHARP.

#### Commended as One of the Likeliest of Stockton Prospects.

Adolph L. Jacobs, who has returned after an inspection of the Sharp company's property at Stockton, reports the pany's property at Stockton, reports the Cross Cut on the 100-foot level advancing rapidly, and is relying on a connection with the ledge in very short time. Fifty feet above there is now exposed four feet of lead ore that is very silicious, and on the new level the sulphides are expected. From that horizon a winze will be sunk with the ore, and to open it up at great depths a permanent shaft will be dropped down at the mouth of the tunnel. Mr. Jacobs characterizes the prospect as one of the likeliest ne has ever seen.

### INLAND'S OPERATIONS.

#### Visitor From the North Tells of the Progress There.

Hon. W. F. Kasiska of Pocatello came down from that prosperous metropolis on the Short Line yesterday, and with on the Short Line yesterday, and with friends is discussing political and industrial interests, with both of which he has long been prominently identified in that State. The Inland Mining company of Philadelphia, which has been developing copper, gold and silver-hearing interests on the reservation, is now equipping them with machinery, and it is understood has some good ore with which to come to market in a short time. In the same locality some others are working, said the visitor, with encouraging results.

#### WEEK ON 'CHANGE.

New York Again Closes at Head of Advancing Column. The week on the mining exchange closed

on an output of 118,032 shares of stock, for which \$29,398.92 was paid, and with the bears less aggressive, the more active traders more buoyant. Of this New York afforded the most pronounced example, and not one who was prophetic enough to embrace its offerings on Monday last but was permitted to mark up a profit While it moved up to 58% during the day it was still sprinting when Celler Jones roperties the incline was still going fown in ore at the close of the day, reained its position at 28 cents, with Vicoria advancing to \$1.92, the customer taking sixty days in which to settle for it. Daly West, whose shareholders will meet in annual session tomorrow, recorded say the stantial gafins on good buying orders at home as well as abroad, while Daly long recognized as one of the best gambles on the board, was firm and in good demand, thoughout around \$2.50. with a held out to Ostario all the week. The was marked down to \$1.25, and around that figure bovered throughout the week, with the management forging its way to an early connection with the big ore body on the lowest level. Mammoth was in better form, and on the assumption that another dividend would be ordered, advanced several points, while Montan, of Tonopah, so largely held in this neck of the woods, closed to a bid of \$2, with \$1.5, refusing to budge at fess than sailant, but was ready and the winse bottom the Star Cop, of Tintle continue favorable to an early change on the lower level, it was weak throughout, as was Lower Mammoth, the management of which has decided to go to the deep, while Victor Con. from while for the workings in the powerful channel is to workings in the nowerful channel is to workings in the outer, while victor Con. from while for the workings in the management is a working sin good demand, the transfers were confined to very few. Horn Silver, Deep Creek, at 42½, while Con. Mercurheld out for 41 at the close, with Sacriourly as was confined to very few. Horn Silver, Deep Creek, at 42½, while Con. Mercurheld out for 41 at the close, with Sacriourly as was confined to very few. Horn Silver, Deep Creek, at 42½, while Con. Mercurheld out for 41 at the close, with Sacriourly a in annual session tomorrow, recorded substantial gains on good buying orders at

# Utah Con. Taps Ore at Great Depth

Latest Development the Most Important in the History of the Company's Operations.

Perhaps the most significant chapter in he development of the Utah Con. of Bingham is that which told last night of disclosures in the crosscut on the 900-foot level, and at a depth greater than any hitherto attained. The development. which so much importance is attached by mine managers and owners throughout the camp of copper, occurs in what in known as No. 1, or ploneer channel, the

#### THE COPPER OUTPUT

#### Record of Production Now Exceeds All Previous Ones.

Assuming that the furnaces of the Utah Con are maintaining the 1 cord of production with which the year was begun and that consignments from that source are being forwarded as at that time to the refinery at Perth Amboy, the crop of copper bullion sent out of the valley of copper bullion sent out of the valley during the week amounted to 192,969 pounds, with over 200,069 pounds contained in the matte from the American's furnaces to be added to this as the record. From the Bingham Con. which has not yet adopted a policy of silence, there was forwarded no less than 300,112 pounds of the high-grade product, while the United States company sent out 282,848 pounds, with its furnaces doing their work with an integrity that is, remarked an attache, hourly improving. While the record or that portion of it which is released, does not verify it, penhaps, it is claimed that the production of the copper furnaces like that of the furnaces at released, does not verify it, perhaps, it is claimed that the production of the copper furnaces like that of the furnaces at which the reduction of the lead ores is the specialty, is much greater than ever in the history of the industry in this State, not is this contention likely to be impeached. The record at the American during the previous month showed a production that exceeded all previous enes, while to this the output of the U.S. lead furnaces has been added. According to the record at the railway offices the consignments to the copper plants are heavier than at any time since their operation was begun, and yet it is claimed that there is capacity at them for just a little more. That the record predicted at the opening of the year is being created, there is, perhaps, no doubt whatever in the minds of the observant.

### THE COLUMBUS MILL.

#### New Plant to Go Into Commission Again This Week. That the mill with which the proper-

ties of the Columbus Con. at Alta has been equipped shall be made to accomplish all for which it was designed and that this will be demonstrated before the seainis will be demonstrated before the senson is much further advanced, there is no doubt whatever, said Fred B. Whitmore, whose services as superintendent were recently obtained by Manager Jacobson, nor is there any doubt, he added, concerning the supply of ideal milling ore now blocked out and to which not a little is being hourly added. Mr. Whithore had come in the previous day, to procure a number of mill men, and with these on the ground operations at the plant will be resumed, and the active production of concentrates begun again the present week. Meanwhile the new winze is dropping down from the tunnel level in copper ores of good quality, and in a short time conditions will have traterially changed. Superintendent Whitmore, who has been identified with some of the most prominent companies in the West and South, may be relied on to get from the Columbus's plant all of which it is capable. He leaves for Alta again this morning. son is much further advanced, there is

## Boston Market Steady.

Special to The Tribune. BOSTON, Mass., Feb. 18.—The local market was again strong today and though trading was confined within narrow limits some shares were taken hold of and advanced. Of course there is more riess manipulation to be seen and first one and then another stock is made a feature. The metal situation is very strong one and the auditor stoke is made a fea-ture. The metal situation is very strong and the price of copper has been ad-vanced the past week, which would neces-sarily mean higher prices when trading becomes more general. Hornblower & Weeks, brokers, 53 State street, Boston, and 10 Wall street, New York, furnish the following quotations:

### Ores at Peavinc.

Another mining strike has been made in the Peavine district. The find was made by William Schweitzer on his claim yesterday. At a depth of four feet he struck ore that assays \$19.37 in gold to the ton, says the Reno Journal. In these values continue the property will brave a paying proposition, for the vein is large and the rock free milling. Mr. Schweltzer's claim adjoins. The Journal mine upon which development work is now in progress. The excitement continues in the district. It is now understood that arrangements have been completed to seed a mill in the district and that work will begin without delay.

#### MINING MATTERS ARE LIVELY AT PARK CITY

Special to The Tribune. PARK CITY, Utab. Feb. 18.—The work of constructing the tunnel from the Lit-tle Bell to the West Quincy is progressing rapidly. It is now scarcely three months since work was begun and already about \$99 feet, or nearly one-third of the entire distance to the West Quiny shaft, has been constructed. During the past week about eleven feet per day has been done. At that rate the work will be finished long before the antici-

At the New York mine everything is looking brighter than it has ever looked before. Good first-class ore continues to be lielsted daily, and as the ore bedies continue to be exposed they lose nothing of their original promise. The ore in the winze has caused considerable speculation as to its amount and quality; but from the most authentic reports it would seem that there is ore there and that it is in sufficient quantity and of such quality as to warrant the management of the mine to feel greatly encouraged.

The people of Park City are anxiously looking forward to the coming meeting of the directors of the Daly West. There have been so many and such conflicting reports concerning the present condition of this mine, as well as of its future, that the people here desire to know what is going to be the future policy of those in charge. The mill continues to employ only two shifts on account of the scarcity of water, and for the past two Sundays has not run at all for the same reason.

Ontario lodge No. I. A. O. U. W., had an interesting meeting and banquet last evening. Following the regular business, two candidates were initiated, after which the banquet was spread and those present spent a very enjoyable evening. Speeches upon various phases of Workmanship were made by several of the prominent members, and these were interspersed with choice vocal selections and sundry anecdotes. and sundry anecdotes.

The joke is on three of our distinguished visitors of the past week. They had come to Park to spend the day and intended to return to Sait Lake City on the afternoon train. In order that they might be in time for the train, which leaves at 3-29 o'clock sharp, they werded their way down to the pation about 2-45 o clock and amused themselves by discussing various subjects as they waited for the train to pull up from the yards and depart. Finally at the end of about forty minutes such waiting they heard a train whistle, and they proceeded to ask Station Agent Goist of the U. P. what train that was. He, in his gentlemnly manner, informed them that it was the afternoon train on the Rio Grande pulling out for Sait Lake City. They returned to the hotel wiser, if sadder, men, for they had learned that Park City, has two rallroads. Accidentally they were overheard discussing the affair among themselves, when the curlosity of the one who overheard prompted him to look over the register of the hotel, there to discover that two of the men were pruminent Chicagoans and that the other way a State Senator from Montana.

#### LEWISSOHN AND U. S.

#### Has Added to His Holdings Since Mr. Channing's Visit.

'Proof sheets" of the report which has een compiled by J. Parke Channing, after an examination of the United States mines and smelter, under an assignment by Adolph Lewiesohn, and of which the Commercial of New York claims to be in possession, induces that journal to believe the conclusions most favorable. Com-menting upon it, the Commercial says:

the conclusions most favorable. Commenting upon it, the Commercial says:

"Mr. Lewissohn is said to have faith in the carning possibilities of this enterprise. Still, the many romors that have been current in connection with the difficulty of the commany to make as satisfactory a showing as anticipated has prompted the private examination now being made. The understanding exists in New York that Mr. Lewissohn's holdings in this company have lately been increased and further action will depend largely on the facts that the private report will show.

While there is no official authority, the belief is general that if the report which is being prepared by Mr. Channing is favorable. Its contents will be made public, while if the facts are such as to be of little value the private character of the report will be used as a justification for secrecy.

"Among those who have followed the workings of this property for the past three years, the statement is unhesitatingly made that a publication of all the facts relating to the development at the inlines would have a benoficial effect upon the stock. While the company has already declared a dividend of \$10.000 for 1905, still the fact that the directors have not given out the report expected has permitted the rumors continually arising on this property to live."

### ORES AND BULLION.

#### Settlements for Week Reflect Condition of the Roads.

The settlements in the ore and buillon markets during the week were reduced to \$458,000, this compared with \$500,500 for the previous one. Notwithstanding the open weather of the last few days, the roads extending from the producers to the various loading stations along the railways are yet in a condition which renders it very difficult traveling for the wagon, and makes it impossible for the hauler to handle more than a fraction of a load. It is to this condition that the apparent shrinkage is attributable, while in reality there has never been a period in the history of the State when the mines were capable of a larger tonnage. The day's settlements were kept down to \$55,600 McCornick & Co. reporting them as they follow: Bullion, \$25,000; gold, silver, lead and copper ores \$25,900. In the metal market silver ruled at 61 cents an ounce lead at \$3.50 and \$4.45 per hundred bounds, and casting copper at 14½ cents a pound. roads extending from the producers to the

### Found Free Gold.

Found Free Gold.

Special to The Tribune.

CALHENTE, Nev. Feb. 18—M. T. Griffeth, half owner of the Dos Cabenas group of gold mines on Virgin river, passed through lown today with splendd samples of free gold in a white honeycombed formation. This ore was taken from a sixteen-incut wen at a depth of twelve feet. Mr. Griffeth expects to put a gang of miners at work on his claims on his return from Salt Lake.

Jack Buzzard and Nic Wilkins, owners of the Mary Ann gold claim near the Virgin free, report having struck a pay leags four fest wide, at a deoth of 10 feet.

Jackson & Freeman, owners of the Great Chief gold-copper group of claims north of Moapa, are drifting on a bole of rich ore showing values of from 8 to 15 per cent copper and from \$4.10 to N7 gold per ton. They have about eighty tons of shipping ore on their dumps.

Lloyd, Burnett & Murbon of the Three Friends and Ruby mines, north of Las Vegas, have completed three miles of road from their mines, where they have now feet of work completed. They hope to make a shipment within the next thirty days.

Mose Leiler and Dick Williams, old-time this week, en route to Dencer, where they are taking some rich ore struck in Death valley. They started last fail for foldfield and, not finding anything there with they could ge hold of struck out into Death valley, where they spent three months prospecting the surface, they struck at welve inch velo, if willed quartz, from which they broke out picces of pure gold the size of a pen, taking anything there which they could ge boil of struck out into Death valley on the small nuggets and, after prospecting the surface, they struck at welve inch velo, if willed quartz, from which they broke out picces of pure gold the size of a pen, taking nearly 100 pounds of this rich quartz.

Murray Keth & Blunner, owners of the Copper Glance claim, located four claims death of the copper of the tot of the Rich of the copper of the select of a live, and lead ore opened up in a 190-foot turnel and is taking out about three tens per day

# **Mammoth Interests**

Company's Gross Earnings During the Anniversary and Dividends Distributed.

of the Mammoth Mining company

#### WEEK AT TINTIC.

#### Conditions at the Uncle Sam's Mill and Others.

f Eureka, Tintic, says:

of Eureka, Tintic, says:

For the past two weeks but one shift has been employed at the Uncle Sam mill, and Superintendent C. C. Griggs says that the force will not be increased until the weather improves sufficiently to enable the handling of the dump orc. A few months ago, before the recent strikes of high-grade ore were made, the company was content to keep the bulk of the force at work taking out milling ore, and at that time the mill was taxed to its capacity, but since the large bodies of shipping ore have been opened up there has been a decrease in the amount of milling ore taken from the mine. Superintendent Griggs says that he wishes to devote more time to the development and shipporn, of the high-

grade product which is taken out along with
the shipping ore.

D. D. Hanks has recently received some
very encouraging reports from his Signal Peak
property near Maryevale. Utah, in which a
number of Eureka people are interested. Over
500 feet of drifting has been done since the
organization of the company, and the ground
will no doubt become as rich and productive
as the neighboring properties.

Thomas Welr was at the Ajax mine last
Monday. It is reported that the company intends to increase the force which is now engased in prospecting. This work is done by
contract.

#### United Bingham Coming With Another Lot of Good Ore.

Ed Hoffman, under whose superintend-

ncy the condition of the Silver Shield

company's Bingham properties has im-proved so rapidly, came in from camp company's Bingham properties has improved so rapidly, came in from camp during the day and with Secretary Mead departed last night for the properties of the Carissa company at Tintic. Of the Shield ore bodies. Superintendent Hoffman says that while neither wall is exposed at this time, the waters are so persistent that it is impossible to begin extraction save at great expense, nor will the management consent to it until this has been overcome. In the property of the United Bingham the condition is one that foretells an increased output as soon as connection with the main tunnel has been effected, and to accomplish this the drifft will have to be extended 150 feet further. Prepared for shipment to the valley fornaces at this time is a 'ot of ore, consisting of about 100 tons that promises a nice piece of money, this having been broken down in the prosecution of development and without stoping whatever. The channel in the United Bingham has been opened up on its strike for over 160 feet and with active extraction a most profitable record is promised.

### JUDGE SHERMAN RETURNS.

After an absence of several weeks, dur ng which he has succeeded in the acquisition of interests from which he promise to derive a fortune at Goldfield, Judge W. A. Sherman has returned to his home in this city to remain until March I. From the Sandstorm, which has developed into one of the most sensational of the camp's producers, ores are now being forwarded.

### Park City Shipments.

The shipments from Park City through the Mackintosh sampler during the week were re-ported as they follow: Total .... Tonopah-Goldfield Transfers.

Thursday's sales on the San Francisco board were recorded as they follow Red Lien. 2000 at Sci Dixie. 10,6000 at Sci Trc. Mac Namara. 2000 at Sig65c. Bullrog. 1300 at 4665c. Tonopah. 150 at \$12 Columbia. 1900 at 50c. Montana-Tonopah. 140 at \$2. Zeiga 10; Rescue. 2560 at 12c. North Star. 3500 at 6065cc. Black Burks. 4000 at 31.75.

President Singless of the American Flag of Park City reappeared in the offices of the company yesteriae, after his recent mishap on a allipery pavement.

James A. Creighton, superintendent of the Eagle & Blue Bell, left for camp again last night.

Manager D. P. Robifing of the Frisco Con.

# in Annual Session

From the sale of ores the management ing the anniversity that terminated at the innual meeting of shareholders yesterday afternoon, derived as much as \$292,158.98. with the receipts from bullion, of which the mill was productive, and others from miscellaneous sources swelling the total to \$309.370.71. During the same period

miscellancous sources swelling the total to \$209.30.71. During the same period there was distributed among the shareholders of the company dividends amounting to \$138.532.70, and while there was an overdraft of \$13.92 when the report of the secretary was closed on February 1, this has since been wiped out and a reserve is again being piled up. The schedule of disbursements shows that during the same period as much as \$57.791.30 was dealt to the labor employed at the mines of the company, with \$5.578 going to the merchants and supply houses.

The report of the superintendent of the mines told of a large amount of exploratory work during the same period, that in which the greater interest was shown relating to developments on the 200-foot level, and in hitherto unexplored territory on the north. While in the lowest workings of the property no large bodies of ore have been encountered, according to the exhibit submitted by Superintondent McIntyre, the condition is highly mineralized and interlaced with lenses of ore anyons of which may lead to the results that are sought. From the \$90-foot level a drift was run to the north 1300 feet and in a winge at a depth of 70 feet below the level the two feet of lead ore is exposed at this time, the ores showing a gross value of \$30 per ton. This ore is occurring in a fissure that affords much promise, said the superintendent in a supplemental report.

In the election of officers and directors Samuel McIntyre, Sr., was again made the president of the company. Samuel McIntyre, Jr., vice-president, and R. M. Wilkinson secretary the oresident of the company, Samuel McIntyre, Jr., vice-president, and R. M. Wilkinson secretary the oresident of the company also serving as ireasurer. The others consist of A. J. Cunningham, A. B. Sawyer, F. D. Clift and Thomas Jennings.

## In its review of the week the Reporter

ys that he wishes to devote more time to e development and shipment of the high-ade ore, and that the mill will be kept in eration at the present time on the low-ade product which is taken out along with shipping ore.

### READY TO SHIP.

#### Interests at Goldfield Bringing Him Generous Returns.

one of the most sensational of the camp's producers, ores are now being forwarded to the smalter, while other interests that promise to reward his endeavors have been added to his holdings. Of the permanence of the camp's resources the Judge has no doubt whatever, and while the greatest depth does not exceed \$\sum\_0\$ feet, there is everything to denote that the wealth of the ledges will continue to go down.

### Mining Notes.

Mining Notes:

Judge J. W. Deane, who arrived from Colorado Friday night, and who at once went into conference with Mr. William H. Tibbals, the broker and mining man, will leave for Goldfield on Tucsday to inaugurate work on a group of most promising locations just acquired by him. The Judge reports the condition of Colorado's camps greatly improved.

Another carload of concentrates is on its way from the Red Elephant of Halley Ida, now operated by Utah talent.
